2 L.W. Marcoux Functional Analysis 1.4. Example. Define  $cK 00(N) = \{f(x_n) | n = 1, 2, \dots; x_n \in \mathbb{R}; x_n = 0 \text{ for all but finitely many } n\}$ . For  $x = (x_n) \in cK 00(N)$ , set  $\|x\|_1 = \sum_{n=1}^{\infty} |x_n|$ . Then  $(cK 00(N); \|\cdot\|_1)$  is a normed linear space. It is not, however, complete. The space  $cK 0(N) = \{f(x_n) | n = 1, 2, \dots; x_n \in \mathbb{R}; \lim_{n \rightarrow \infty} x_n = 0\}$ ; equipped with the same norm  $\|x\|_1 = \sum_{n=1}^{\infty} |x_n|$

In addition, the strategy of this field, namely of studying collections of objects to find out properties they have in common, and that of studying spaces by the functions defined on them, is now pervasive in most areas of pure mathematics.

### **[Download] Functional Analysis: An Introduction to Metric ...**

Functional analysis is a branch of mathematical analysis, the core of which is formed by the study of vector spaces endowed with some kind of limit-related structure (e.g. inner product, norm, topology, etc.) and the linear functions defined on these spaces and respecting these structures in a suitable sense. The historical roots of functional analysis lie in the study of spaces of functions ...
