Well, working in the manual mode is not as bad as some people think, and it is pretty much the same game of "guess the flash power". However, I do not recommend beginners to start with manual flash until they are comfortable with manual exposure. In manual flash photography, you will not want to put the camera in the full auto mode.

Flash Photography Basics - A Beginner's Guide

When shooting with flash, your camera will generally choose a fairly high shutter speed to prevent motion blur, and then it will adjust the aperture and flash output to compensate. But with this feature, a slower shutter speed is deliberately used to create some blur effects.

The Ultimate Flash Photography Beginners Guide

The closer your flash is to the lens, the better chance of getting the unwanted red eye effect in your photos. First, Some Basic Flash Photography Terms. TTL - Most cameras will allow you to set the flash to TTL (Through The Lens metering) so that the amount of flash used is based on a signal coming back to the camera. The camera will send out a short 'test' flash and then see how much light comes back.
