One main reason that a check engine light comes on with no code being stored is that there is a software error. This is often the result of something being wrong with the OBD reader that the driver, parts store, or mechanic shop is using. Most frequently, the software errors stem from a low-level OBD reader being used.

The reset check engine lights process takes an extra step on modern cars. Before the deployment of OBD II in 1996, resetting a check engine light was a simple matter. Just disconnect the battery for more than 10 seconds and you're done. You could even pull the electronic control module fuse on many models.
