related articles on the website as well.

Hardware Software Co Design And

Hardware-software co-design was a concept that began in the 1990s. Its core concept was the concurrent designs of hardware and software components of complex electronic systems. It aimed to incorporate the two technologies and

exploit the synergy between the two.

What is Hardware Software Co-design and How Can it Benefit ...

Hardware/software co-design is when the software and hardware are developed simultaneously, bringing the software and hardware teams together to optimize a design. The initial idea

Read Online Hardware Software Co Design And Co Verification

behind co-design was that a single language could be used to describe hardware and software. With a single description, it would be possible to optimize the implementation, partitioning off pieces of functionality that would go into accelerators, pieces that would be implemented in custom hardware and pieces that ...
