Tortricini - Wikipedia

Geometridae are small to medium-sized moths that exhibit high species richness and local abundance and are often quite specialized to habitat and possibly to larval host plant (as far as is known for the tropical fauna). Sphingidae, on the other hand, are only moderately species-rich and are large and often extremely mobile insects.

The order Lepidoptera includes butterflies and moths and is the second-largest group in the insect world. Description. The scaly wings of Lepidopteran insects come in two pairs and are often quite colorful. To identify a specific butterfly or moth, you will usually need to look at the colors and unique markings on the wings. Insects in this.
